

DEVELOP AND CUSTOMIZE A B2B COMMERCE ON CLASSIC STORE (B2B201)

OVERVIEW

Explore the Salesforce B2B Commerce platform on Classic and discover how and when to extend your events with code. In this 2-day class, our B2B Commerce Cloud experts will walk you through how to use code to customize the UI and extend functionality in your B2B Commerce Cloud on Classic storefront so you can deliver a buyer experience that satisfies your organization's unique requirements.

WHO SHOULD TAKE THIS COURSE ?

The audience for B2B Commerce Developer is any individual who will participate in a new implementation who needs working knowledge and experience with B2B Commerce technical components. Attendees should have intermediate skills in:

- Object Oriented Programming (Apex or Java)
- Full-Stack Development (VisualForce, JavaScript, CSS and REST APIs, JSON, Handlebars, and jQuery)
- Salesforce Administration (Sharing Rules, Process Builder, and Object Relationships)

WHEN YOU COMPLETE THIS COURSE, YOU WILL BE ABLE TO:

- Identify where and what events require code extension.
- Effectively navigate and configure in B2B Commerce on Classic Admin.
- Implement UI, Logic Class, and Service Class Overrides along with Subscriber Code Integration.
- Create your own B2B Commerce on Classic solution and troubleshoot problem areas during the development cycle.
- Take the next step toward a [B2B Commerce Developer Accreditation](#).

PREWORK

Please complete the following trailmix before attending our expert-led class [Trailmix, Trailhead Academy](#)
